

CSE 115L: Practice Problems (Files)

1. Write a program in C that will write all even numbers between 1 to N in a text file named **alleven.txt**. N will be input to your program.
2. Write down a program in C that will write the content of a string in a text file named **string.txt**. The string will be input to your program.
3. Write a program in C to that will read a text file named story.txt and display how many vowels are there in the file. For creating the test file follow the procedure below:
 - a. Open Notepad in your computer.
 - b. Type the following in a new file in Notepad.

Don't underestimate the power of a common man.
 - c. Save the file named story.txt in the folder where you have stored your program from Codeblocks.
 - d. When you run your program from codeblocks, it must say there are 15 vowels.
